PROFILE

Software Engineering student with hands-on experience designing and developing backend-focused web applications using Python, Django, SQL, and modern web technologies. Experienced in building real-world business systems, including ERP, inventory management, healthcare, and mobile applications, with a strong foundation in backend development, database design, and software engineering principles. Demonstrated ability to collaborate in cross-functional teams, solve complex technical problems, and deliver scalable software solutions through academic projects and hackathons. Seeking an entry-level Software Developer position where I can contribute to building reliable software products while continuing to grow as a backend engineer.

EXPERIENCE

Software Developer (Team Project)
Joint Abaarso Tech University × Soltelco

12/2025
Hargeisa

- Designed and developed an internal employee portal during a competitive hackathon
- Implemented backend business logic, database operations, and authentication features using Django.
- Collaborated with a cross-functional team to deliver a complete solution within hackathon time constraints.
- Project selected as the winning solution based on functionality, creativity, and teamwork
- Conducted code reviews and implemented best practices to maintain high-quality code standards.

EDUCATION

Bachelor of Software Engineering
Abaarso Tech University, Hargeisa, Somaliland
In Progress

07/2026
Hargeisa, Somaliland

SKILLS

- Python
- JavaScript
- Dart
- Django
- Flutter
- Tailwind
- Bootstrap
- Firebase

PROJECTS

Integrated Inventory and Operations Management System with AI-Assisted Chatbot

04/2026 – Present

Python, Django, HTMX, Tailwind CSS, JavaScript

Developed a comprehensive Inventory and Operations Management System as a Bachelor of Software Engineering graduation thesis project, using a real-world company as the case study to model inventory control, procurement, warehouse operations, sales tracking, analytics, and organizational workflows.

The platform was built using Django and follows a modular multi-app architecture integrating Inventory Management, Procurement & Purchasing, Sales Management, Analytics, Notifications, User & Role Management, and an AI-assisted Chatbot into a unified business solution.

Key contributions:

- Designed the database schema, system architecture, and business workflows.
- Implemented role-based access control with multiple user roles and permissions.
- Developed inventory tracking, stock control, and warehouse management functionality.
- Built procurement and purchase-order workflows.
- Created analytics dashboards for operational insights and reporting.
- Implemented a real-time notification system for business events and approvals.
- Integrated an AI-assisted chatbot to support user interactions and information retrieval.

Hospital Appointment Management System

Django, Python

- Built a web-based system for patient appointment booking and administration
- Implemented authentication, booking workflows, and admin dashboard
- Ensured data integrity and prevented double booking

BookShare Mobile App

Dart, Flutter, Firebase

Community Library App - a mobile app where users can share books they own with others in their area.

TabSaver Chrome Extension

JavaScript

Created a Chrome extension to save and organize browser tabs using persistent storage
